The verbose-trad1 style

This is a traditional citation style which uses scholarly abbreviations like *ibidem*, *idem*, *opere citato*, and *loco citato* in a special way to replace recurrent authors, titles, and page ranges across separate citation commands. This style is best explained by example.

Outline

Let's assume a bib file with the following entries:

Entry Key	Entry Data
a1	Author A, Title 1
a2	Author A, Title 2
a3	Author A, Title 3
b1	Author B, Title 1

Here's an example of how this citation scheme works:

Command	Conditions	Citation
\cite{a1}	Initial reference	Verbose citation
\cite{b1}	Initial reference	Verbose citation
\cite[26]{a1}	Author changed + Title is last title by this author + Page is new/different from last page cited	Author, op. cit., page
\cite[59]{b1}	Author changed + Title is last title by this author + Page is new/different from last page cited	Author, op. cit., page
\cite[26]{a1}	Author changed + Title is last title by this author + Page is last page cited from this work	Author, loc. cit.
\cite[59]{b1}	Author changed + Title is last title by this author + Page is last page cited from this work	Author, loc. cit.
\cite{a2}	Initial reference	Verbose citation
\cite{b1}	Author changed + Title is last title by this author	Author, op. cit.
\cite{a1}	Author changed + Title different from last title by this author + Title has been cited before	Author, Title
\cite[55]{a2}	Same author + Title different from last title by this author + Title has been cited before	idem, Title, page
\cite[25]{a2}	Same author and title + Page is different from last page cited	ibidem, page
\cite[25]{a2} \cite[25]{a2}	Same author and title and page (with option ibidpage=true)	ibidem, page ibidem

Additional package options

The ibidpage option

The scholarly abbreviation *ibidem* is sometimes taken to mean both 'same author + same title' and 'same author + same title + same page' in traditional citation schemes. By default, this is not the case with this style because it may lead to ambiguous citations. If you you prefer the wider interpretation of *ibidem*, set the package option <code>ibidpage=true</code> or simply <code>ibidpage</code> in the preamble. The default setting is <code>ibidpage=false</code>.

The strict option

A case related to the definition of *ibidem* is the scope of the *ibidem* and *idem* replacements. By default, this style will only use such abbreviations if the respective citations are given in the same footnote or in consecutive footnotes. The point of this restriction is also to avoid potentially ambiguous citations. Here's an example:

This could be rendered as follows:

- 1 Aristotle. De Anima. Ed. by Robert Drew Hicks. Cambridge: Cambridge University Press, 1907.
- 2 Ibid.
- 3 Averroes touches upon this issue in his Epistle on the Possibility of Conjunction.
- 4 Ibid.

What does the *ibidem* in the last footnote refer to? The last formal citation, as given in the first and the second footnote (Aristotle), or the informal reference in the third one (Averroes)? Too avoid such citations, this style will only use *ibidem* and *idem* replacements if the respective citations are given in the same footnote or in consecutive footnotes:

- 1 Aristotle. De Anima. Ed. by Robert Drew Hicks. Cambridge: Cambridge University Press, 1907
- 2 Ibid.
- 3 Averroes touches upon this issue in his Epistle on the Possibility of Conjunction.
- 4 Aristotle, De Anima.

Depending on your writing and citing habits, however, you may prefer the less strict *ibidem* and *idem* handling. You can force that by setting the package option strict=false in the preamble. It is still possible to mark a manually inserted discursive citation with \mancite when required:

This will suppress the ibidem in the last footnote.

The citepages option

Use this option to fine-tune the formatting of the pages and pagetotal fields in verbose citations. When an entry with a pages field is cited for the first time and the postnote is a page number or a page range, the citation will end with two page specifications:

```
Author. "Title." In: Book, pp. 100-150, p. 125.
```

In this example, "125" is the postnote and "100–150" is the pages field (there are similar issues with the pagetotal field). This may be confusing to the reader. The citepages option controls how to deal with these fields in this case. The option works as follows, given these citations as an example:

```
\cite{key}
\cite[a note]{key}
\cite[125]{key}
```

citepages=permit allows duplicates, i.e., the style will print both the pages/pagetotal and the postnote. This is the default setting:

```
Author. "Title." In: Book, pp. 100–150.
Author. "Title." In: Book, pp. 100–150, a note.
Author. "Title." In: Book, pp. 100–150, p. 125.
```

citepages=suppress unconditionally suppresses the pages/pagetotal fields in citations, regardless of the postnote:

```
Author. "Title." In: Book.
Author. "Title." In: Book, a note.
Author. "Title." In: Book, p. 125.
```

citepages=omit suppresses the pages/pagetotal in the third case only. They are still printed if there is no postnote or if the postnote is not a number or range:

```
Author. "Title." In: Book, pp. 100–150.
Author. "Title." In: Book, pp. 100–150, a note.
Author. "Title." In: Book, p. 125.
```

citepages=separate separates the pages/pagetotal from the postnote in the third case:

```
Author. "Title." In: Book, pp. 100–150. Author. "Title." In: Book, pp. 100–150, a note. Author. "Title." In: Book, pp. 100–150, esp. p. 125.
```

The string "especially" in the third case is the bibliography string thiscite, which may be redefined.

The dashed option

By default, this style replaces recurrent authors/editors in the bibliography by a dash so that items by the same author or editor are visually grouped. This feature is controlled by the package option dashed. Setting dashed=false in the preamble will disable this feature. The default setting is dashed=true.

Hints and caveats

If you want terms such as ibidem to be printed in italics, redefine $\mbox{\tt mkibid}$ as follows:

\renewcommand*{\mkibid}{\emph}

German users should note that the scholarly abbreviations typically used in German do not make a clear distinction between op. cit. and loc. cit. Both are rendered as a.a.O., possibly causing some citations to be misleading. It may be preferable to use the verbose-trad2 style in German documents. If you really want to use verbose-trad1, use the Latin keywords. This is accomplished by putting the following in the preamble or the configuration file:

```
\DefineBibliographyStrings{german}{%
  idem = {idem},
  idemsm = {idem},
  idemsf = {eadem},
  idemsn = {idem},
  idempm = {eidem},
  idempf = {eaedem},
  idempn = {eadem},
  idempn = {eidem},
  idempn = {eidem},
  idempn = {eidem},
  idempn = {ibid\addot},
  opcit = {op\addotspace cit\addot},
  loccit = {loc\addotspace cit\addot},
}
```

Now let's go over the previous examples again, using real bibliography entries this time.

\footcite examples
